Testing Pre-Production

In preproduction, all transactions are simulated. In order to simulate success and failure responses, please use numbers with follwing suffixes to get appropriate response.

For example, in order to simulate a successfully completed transaction, please replace the last three digits of the number with 100.

Suffixes:

- `100 , 200 , 300` - **COMPLETED** (PIN Less)
- `101 , 201 , 301` - **COMPLETED** (PIN Based)
- `102 , 202 , 302` - **INVALID-CREDIT-PARTY**
- `103 , 203 , 303` - **BARRED-CREDIT-PARTY**
- `104 , 204 , 304` - **OPERATOR-CURRENTLY-UNAVAILABLE**
- `105 , 205 , 305` - **DUPLICATED-TRANSACTION**
- `106 , 206 , 306` - **DECLINED**

Three different scenarios:

- `10X` - Response within 3 seconds.
- `20X` - Response after 20 seconds (long duration)
- `30X` - Response as SUBMITTED (very long delay), after 5 minutes will update to a final status.
